

I say a resounding NO to any form of BPL. The BBC and the nation of Japan have said, "NO" after quantitative studies of the interference such systems cause other wireless services.

I'm all for homeland security. I'm all for wireless communications (like those used by the military, broadcast radio, and others services that will provide communications in times of emergency services). Any action by the FCC in support of BPL will be a resounding vote against homeland security.

The wired world is not always there (the northeast US electrical blackout, virus attacks on the internet, and overloaded communications lines during 9/11 and other disasters). Who will you turn to when the lights go out? Say NO to BPL.
